# Network Assessment Client Risk Report **Design Data Corporation**

Prepared by: **Design Data Corporation** 

CONFIDENTIALITY NOTE: The information contained in this report document is for the exclusive use of the client specified above and may contain confidential, privileged and non-disclosable information. If the recipient of this report is not the client or addressee, such recipient is strictly prohibited from reading, photocopying, distributing or otherwise using this report or its contents in any way.

### **Discovery Tasks**

The following discovery tasks were performed:

	TASK	DESCRIPTION			
✓	Detect Domain Controllers	Identifies Domain Controllers and Online status.			
✓	FSMO Role Analysis	Enumerates FSMO roles at the site.			
✓	Enumerate Organization Units and	Lists the Organizational units and Security Groups with			
	Security Groups	members.			
✓	User Analysis	List of users in AD, status, and last login/use. Helps identify			
		potential security risks.			
✓	Detect Local Mail Servers	Mail server(s) found on the network.			
✓	Detect Time Servers	Time server(s) found on the network.			
✓	Discover Network Shares	Comprehensive list of Network Shares by Server.			
✓	Detect Major Applications	Major apps / versions and count of installations.			
✓	Web Server Discovery and Identification	List of web servers and type.			
✓	System by System Event Log Analysis	Last 5 System and App Event Log errors for servers.			
✓	Detailed Domain Controller Event Log	List of event log entries from the past 24 hours for the			
	Analysis	Directory Service, DNS Server and File Replication Service			
		event logs.			
✓	Network Discovery for Non-A/D Devices	List of non AD devices responding to network requests.			
✓	SQL Server Analysis	List of SQL Servers and associated database(s).			
✓	Internet Domain Analysis	"Whois" check for company domain(s).			
	Password Strength Analysis	Uses MBSA to identify computers with weak passwords that			
		may pose a security risk.			
	Missing Security Updates	Uses MBSA to identify computers missing security updates.			
✓	Internet Access and Speed Test	Test of internet access and performance.			
	External Security Vulnerabilities	List of Security Holes and Warnings from External			
		Vulnerability Scan.			

### **Risk Score**

The Risk Score is a value from 1 to 10, where 10 represents significant risk and potential issues.

There are significant issues in the network that should be addressed immediately. Multiple significant risk factors contribute to giving the high risk score. Review the summary issues on the following page and the full report for details.

### **Issues Summary**

This section contains summary of issues detected during the Network Assessment. It is based on general best practices and may indicate existing issues or points of interest.

### **Inactive Users**

We discovered <u>17 active users</u> that have not logged in within the past 30 days. These accounts most likely need to be disabled or removed if the users are no longer active. Active accounts that are not in use may pose a security risk and should be addressed with a User Audit.

### **Inactive Computers**

We discovered a total of  $\underline{43}$  computers of which only  $\underline{20}$  have registered with the domain controller in the past 30 days. There are  $\underline{23}$  computers entries that may no longer be relevant. While not inherently harmful, the defunct systems should be removed from Active Directory routinely.

### **Organizational Units**

We discovered <u>5 populated</u> Organizational Units. You should review the details of the Organization Units to ensure they align with your business and operational needs. Proper alignment is crucial to ensuring security and access policies are adhered to properly.

#### **Domain Controllers**

With only <u>1 online</u> Domain Controller, there is a high risk of significant outage due to a lack of redundancy.

### **Insecure Listening Ports**

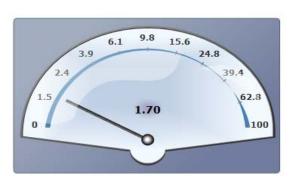

<u>12 computers</u> were detected as using potentially insecure protocols. There may be a legitimate need to use these protocols, but risks should be assessed to prevent unauthorized access.

# **Internet Speed Test Results**

Download Speed: 15.98 Mb/s

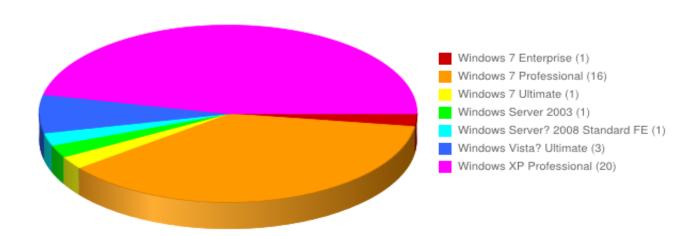

3.9 6.1 9.8 15.6 24.8 39.4 1.5 62.8

Upload Speed: 1.70 Mb/s

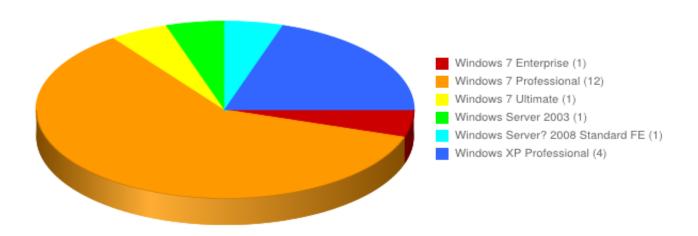

# **Asset Summary**

Total Computers by Operating System (43)

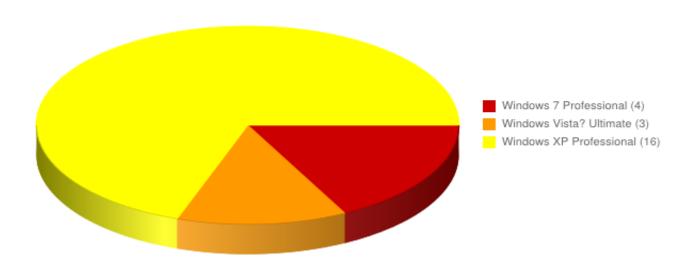

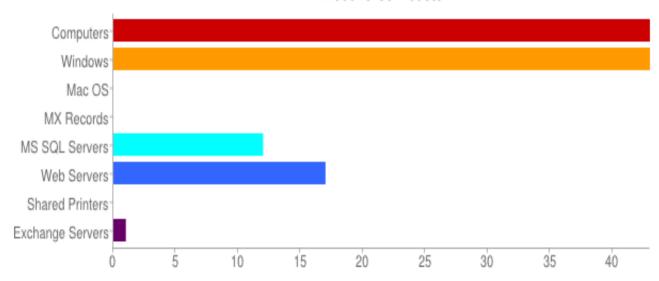

Active Computers by Operating System (20)

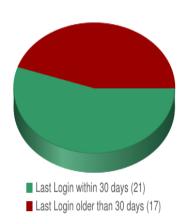

Inactive Computers by Operating System (23)

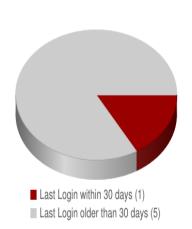

# Discovered Assets

Enabled Users (38)

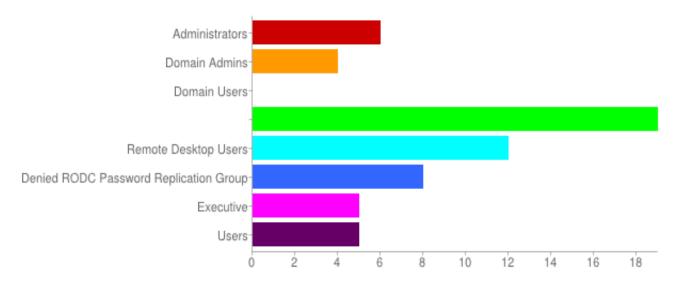

Disabled Users (6)

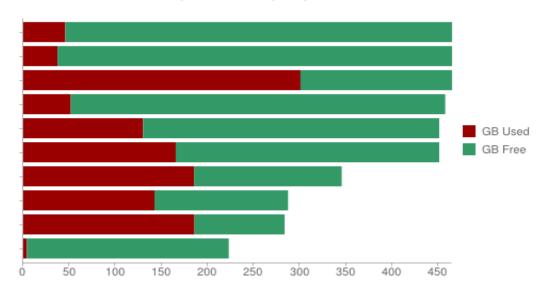

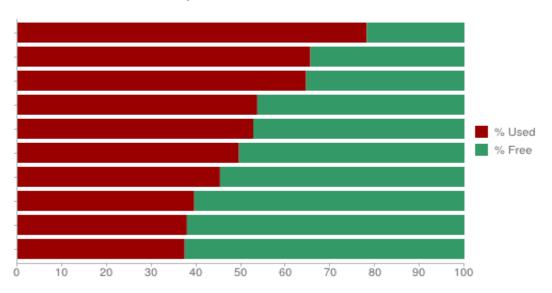

## User Security Role Distribution (Admin and Top 5)

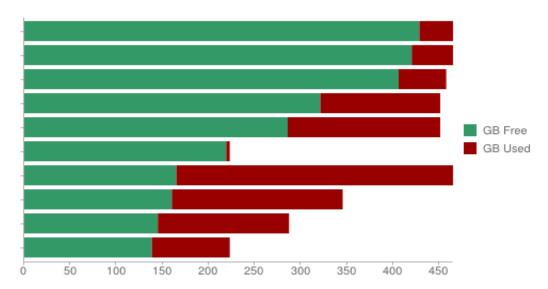

Top 10 Drive Capacity

Top 10 Drive % Used

Top 10 Drive Free Space

This section contains a listing of the antivirus, antispyware, and firewall information as reported by Security Center, which is then categorized by domain membership. A cell with a green check indicates "yes", a red X indicates "no", and empty indicates that no information was reported by security center.
